ABSTRACT

This application helps to automate the agricultural society. In this application contain a number of modules for automate the application that is we can register the farmers and customer. This application contain a provision for categorize the items in different manner.

The current system is not so efficient and can leads to a major wastage of time as Farmers are not able to sell their products on proper time as they wish. The main purpose of the proposed system is for providing an environment where the customers will be able to order organic products according to their needs as well as farmers are able to sell their products online on proper time.

Modules

- 1.Admin
- 2.Seller
- 3.Customer
